Kampala, Uganda

Profile:

I am a motivated and detail-oriented Computer Science graduate from Makerere University, awaiting official graduation, with experience in software development, system design, customer service, and STEM education. I have a strong technical foundation in Java, Python, Django, Spring Boot, Hibernate, Flutter, Go, PostgreSQL, and MySQL, and enjoy developing user-focused software solutions. During my internship at Pahappa Ltd, I contributed to enterprise application development, gaining practical backend and full-stack experience. I also work as a Customer Service Representative at Multi Choice Uganda – Exquisite Solutions Ltd, handling customer inquiries, resolving technical and billing issues, and supporting subscriptions. Additionally, I volunteered as a STEM trainer through school outreach programs, teaching high school students robotics and Computer Science concepts through practical lessons and bootcamps. These experiences strengthened my communication, leadership, problem-solving, teamwork, and mentoring abilities. I am passionate about technology, artificial intelligence, automation, and continuous learning, with a strong desire to contribute to innovative and impactful projects.

Academic Qualifications:

Awarding Institution	Award Attained	Period
Makerere University	Bachelor of Science in Computer Science (awaiting final graduation)	August 2023 – June 2027
Gombe Secondary School	Uganda Advanced Certificate of Education (UACE)	2020 – 2022
Wits College Namulanda	Uganda Certificate of Education (UCE)	2016 – 2019

Work experience

Institution	Period	Position held	Key achievements
Multichoice Uganda - Exquisite Solutions Ltd.	August 2026 - To date	Customer Service Representative	• Managed inbound and outbound customer calls to address inquiries, complaints, and account-related issues. • Assisted customers with subscription activations, billing issues, and service upgrades.

Institution	Period	Position held	Key achievements
			• Provided technical support and troubleshooting for digital TV and streaming services. • Maintained accurate records of customer interactions using CRM software. • Achieved customer satisfaction through personalized support and efficient issue resolution.
Pahappa Ltd	June 2025 - August 2025	Software Development Intern	• Developed MedCare, an admin bootstrap Hospital Management System, during the internship. • Contributed to the Pahappa Goals Bucket (PGB) System, a KPI tracking and performance management platform, during a short extension after the internship. • Worked with Java, Spring Boot, Hibernate, JSF (PrimeFaces), and MySQL in a full-stack environment. • Implemented authentication, role-based access, dashboards, and performance review features. • Collaborated with senior developers and project managers in an Agile workflow, using GitHub for version control. • Gained practical experience in enterprise system development, testing, and deployment.

Volunteer experience

Organization	Period	Key achievements
STEM Program - School Outreach	September 2025 - May 2026	• Volunteered as a trainer in the STEM program, visiting schools to teach high school students robotics and other Computer Science topics. • Shared concepts from my Computer Science with high school students in a simple, practical way. • Taught at STEM bootcamps, introducing students to robotics and computing. • Strengthened my presentation, communication, and mentoring skills through regular teaching.

Key Projects

Project	Tech Stack	Key Features
Nexus HMS: Hotel Management System	React, Role-Based Access Control, Modular Architecture, Centralized Billing Engine	• Enterprise-grade hospitality management platform with a centralized backend and two dedicated frontends: a public guest portal and a role-based staff portal. • Covers rooms & bookings, restaurant & bar, spa/sauna & wellness, events & conferences, billing & finance, inventory, staff management and recognition, careers, and analytics dashboards. • Granular role-based access control and configurable branding.
BamikaHub: Bamika Engineering Inventory & Operations Management System	Role-Based Access Control, Multi-Site Inventory Tracking, Automated Alerts & Reporting	• Centralized platform built for Bamika Engineering Company Ltd to digitize inventory, project operations, finance, and technical support across multiple sites. • Multi-warehouse stock tracking with full audit trails, and material request/approval workflows. • Project progress monitoring, and budget and requisition management in UGX. • Internal IT support ticketing module and real-time reporting dashboards.
RedHope AI: Final Year Project *Makerere University, Group CS26-30*	React.js, Django REST Framework, PostgreSQL, Neo4j, scikit-learn, Leaflet Maps	• AI-driven donor retention management system developed for the Uganda Blood Transfusion Service, shifting donor management from reactive to proactive. • Rule-based WHO/UBTS eligibility engine (98.3% accuracy, zero false positives). • Machine learning donor-availability prediction model (Logistic Regression, 83% recall). • Retrieval-Augmented Generation chatbot for donor support (90% top-one retrieval accuracy). • Geospatial donor-camp matching, personalized campaign targeting, and gamified retention features.
UniTeam: University Group Project Management System	Role-Based Access Control, Progress Dashboards, File Version Control	• Web-based platform that streamlines collaboration and coordination for university group assignments, addressing poor task accountability and fragmented communication. • Project and group management, task tracking, deadline reminders, version-controlled file sharing, project discussions, progress dashboards, and contribution monitoring. • Role-based access for students, lecturers, and administrators.

Project	Tech Stack	Key Features
EdgeVault: Document Management System	Spring Boot, MinIO, Docker, REST APIs	• Secure, scalable document management platform for centralized storage, organization, and retrieval of electronic files. • Separates file storage from application data using MinIO object storage behind a Spring Boot backend, containerized with Docker for consistent deployment. • Supports role-based access, rich document metadata, and structured, searchable organization.
Legacy Chillout Website & Foundation	Website Development	• Designed and developed the website for Legacy Chillout and its foundation. • Live at: https://legacychillout.com/
Bamika Engineering Website	Website Development	• Designed and developed the company website for Bamika Engineering Company Ltd. • Live at: https://bamikaeng.org/

Additional Projects

Project	Technologies
E-commerce Website Prototype	HTML, CSS, JavaScript, Django
Coffee Bean Quality Estimation Using AI	Python, PyTorch, OpenCV - Vision Transformers & CNNs with knowledge distillation
Library Management System	MySQL
Glamazon - Salon Booking App	Flutter, Firebase
Pahappa Goals Bucket (PGB) System (Internship)	Java, Spring Boot, Hibernate, JSF (PrimeFaces), MySQL
MedCare HMS - Medical Records & Billing Module (Internship)	Java, JSF, Hibernate, MySQL
MedCare HMS - Reimplementation	Python, Django, HTML, Bootstrap CSS, JavaScript

Skills

Programming languages	Python, Java, Go, C++, JavaScript, Dart, SQL
Web & software development	Website Development, Full-Stack Application Development, System Design, REST APIs
Frameworks & tools	Spring Boot, Django, Flask, Flutter, React, PyTorch, OpenCV, Firebase
Databases	MySQL, PostgreSQL, SQLite, Neo4j
Other	Git/GitHub, Agile Development, Docker, Problem-Solving, Presentation & Communication

Languages:

English
Luganda
Runyankore

Hobbies and Interests:

Programming, singing, swimming.
